ANSWER SHEET
Term 1 AY 2025 - 2026

Name: Raya Llyanne Bernabe Palmes	SCORE:
Section: BSIS01	Date: 09/15/ 2026

1.

The screenshot displays a Visual Studio IDE with a C# project named 'WhileFormApp-Palmes'. The code in 'Form1.cs' defines a partial class 'formBG' with a 'formBG()' method and a 'btnSTART_Click' event handler. The event handler contains a while loop that increments 'picberry1.Left' and calls 'Application.DoEvents()' and 'System.Threading.Thread.Sleep(100)'. A label 'lblFIND.Text' is updated with 'Berries Harvested!'. The game window 'bgberry' shows a blueberry character, a basket of berries, and buttons for 'FIND MR. BERRY' and 'HARVEST START!'. The output window shows the application running successfully.

```
1 namespace WhileFormApp_Palmes
2 {
3     4 references
4     public partial class formBG : Form
5     {
6         1 reference
7         public formBG()
8         {
9             InitializeComponent();
10        }
11        1 reference
12        private void btnSTART_Click(object sender, EventArgs e)
13        {
14            while (picberry1.Left < picberries.Left - 50)
15            {
16                picberry1.Left += 10;
17                Application.DoEvents();
18                System.Threading.Thread.Sleep(100);
19            }
20            lblFIND.Text = "Berries Harvested!";
21        }
22    }
23 }
```

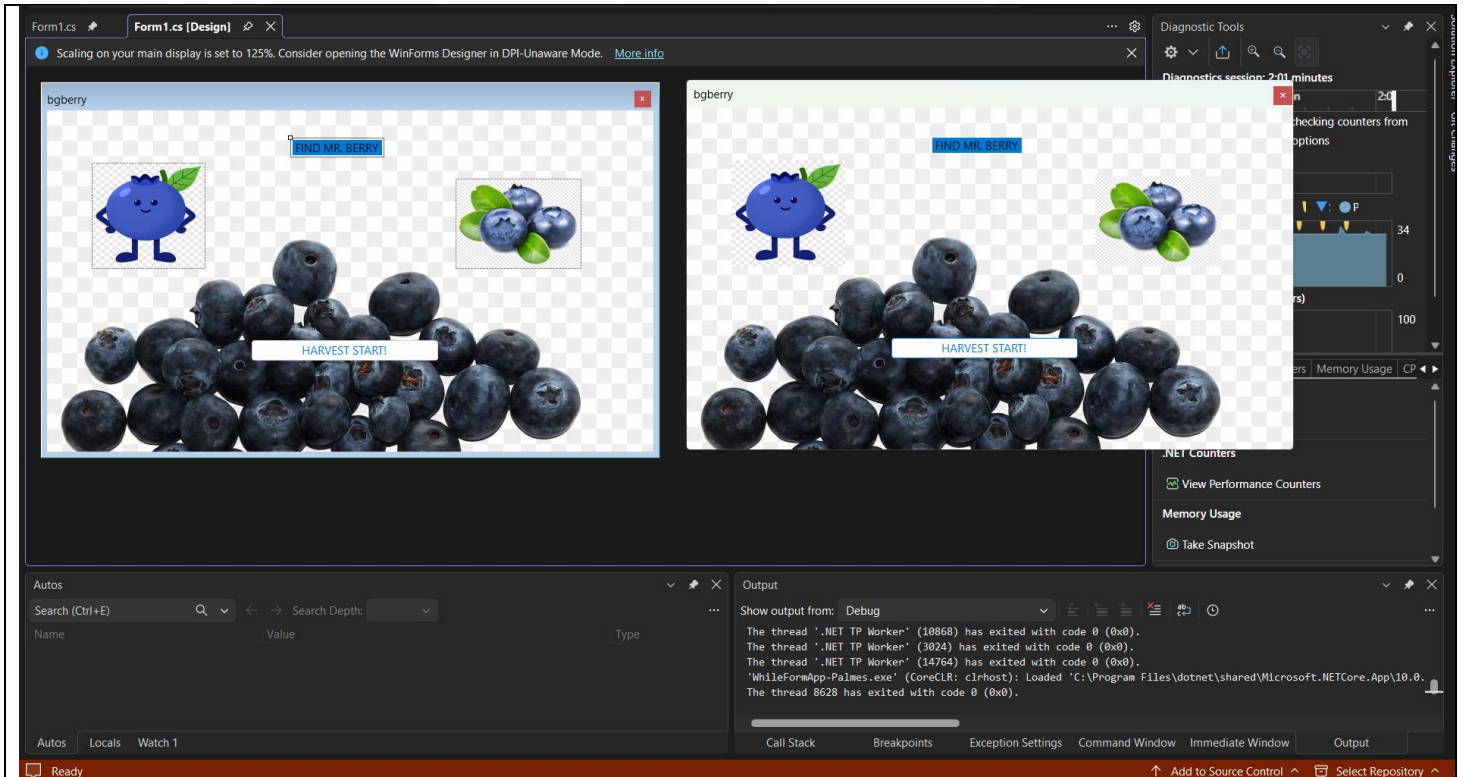

Output:

```
'WhileFormApp-Palmes.exe' (CoreCLR: clrhost): Loaded 'C:\Program Files\dotnet\shared\Microsoft.WindowsDesktop.Ap
The thread '.NET TP Worker' (10868) has exited with code 0 (0x0).

Visual Studio Code interface showing a WinForms application in Design mode. The application window 'Form1' contains a game interface with a 'GUESS THE SECRET NUMBER' title, a 'Guess a number from 1-10' label, a 'YOUR GUESS?' input field, a 'GUESS NUMBER' button, and a 'Try to find the secret number!' label. The background is a pattern of yellow and white circles. The Visual Studio Code interface includes the menu bar, toolbar, Solution Explorer, and Output window. The Output window shows debug messages for the application's startup.

Term 1 AY 2025 - 2026

5.

The screenshot displays a Visual Studio IDE with a C# WinForms application named 'WinFormsApp3' running in debug mode. The code in 'Form1.cs' defines a 'Form1' class with a 'Form1_Load' event handler and a 'btnFight_Click' event handler. The 'btnFight_Click' method implements a monster battle logic where the monster's HP is reduced by 10 until it reaches 0, at which point the 'RESULT' button is enabled. The UI shows a forest background with a 'MONSTER BATTLE' overlay containing the text 'Attack the monster until it is defeated!', a 'FIGHT!' button, and a 'RESULT' button. The output window shows the application loading successfully.

```
1 namespace WinFormsApp3
2 {
3     4 references
4     public partial class Form1 : Form
5     {
6         1 reference
7         public Form1()
8         {
9             InitializeComponent();
10        }
11
12        1 reference
13        private void Form1_Load(object sender, EventArgs e)
14        {
15        }
16
17        1 reference
18        private void btnFight_Click(object sender, EventArgs e)
19        {
20            int hp = 50;
21            string result = "";
22
23            do
24            {
25                hp -= 10;
26                result += "Monster HP: " + hp + "\n";
27            } while (hp > 0);
28        }
29    }
30 }
```

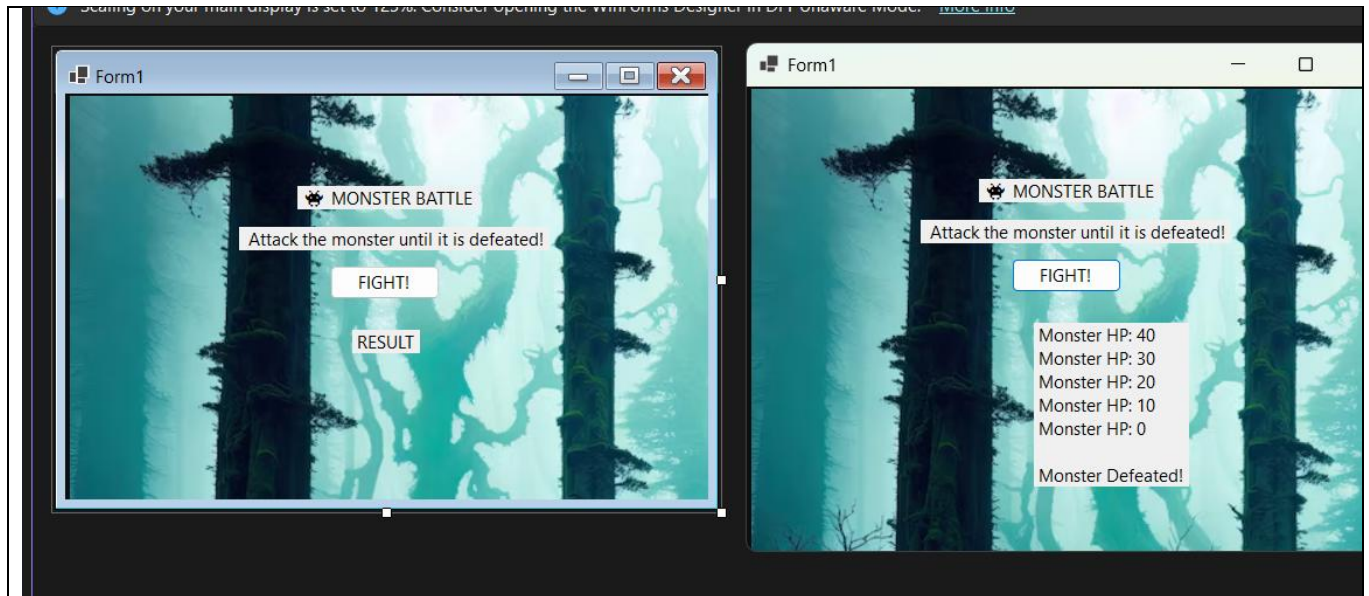

Output

7.

The screenshot displays the Visual Studio IDE with a C# project named 'WinFormsApp7'. The code in 'Form1.cs' implements a door selection game. It features a switch statement that responds to three door choices: 1 (treasure), 2 (monster), and 3 (magic potion). A default case prompts the user to choose a door. The application window 'Form1' is shown in the design view, featuring three wooden door images and a text box for the user to enter a door number. The text box is highlighted with a blue selection bar.

```
public Form1()
{
    InitializeComponent();
}

private void btnOpen_Click(object sender, EventArgs e)
{
    int door = Convert.ToInt32(txtDoor.Text);

    switch (door)
    {
        case 1:
            lblResult.Text = "🏠 You found treasure!";
            break;

        case 2:
            lblResult.Text = "👹 A monster appeared!";

The screenshot displays a Visual Studio code editor with a C# file named `WinFormsApp9.Form1`. The code defines a `Form1` class with an `InitializeComponent()` method and two event handlers. The `label2_Click` method is currently empty. The `btnCollect_Click` method generates a string of 10 stars and displays it in a message box.

```
public Form1()
{
    InitializeComponent();
}

1 reference
private void label2_Click(object sender, EventArgs e)
{
}

1 reference
private void btnCollect_Click(object sender, EventArgs e)
{
    string stars = "";

    for (int i = 1; i <= 10; i++)
    {
        stars += "★";
    }

    MessageBox.Show(stars);
}
```

To the right, a preview of the application is shown. The window, titled `Form1`, has a background of falling yellow stars. It contains the text `★ STAR COLLECTOR`, a message `Collect stars to increase your score!`, a label `★ Stars: 0`, and a button labeled `★ COLLECT`.
